Secerno wins Business Hardware Supplier of the Year at Computing Awards 2007

Oxford, UK – November 8 2007– Secerno, the technology leader in data security today announced it has been recognised as the ‘Business Hardware Supplier of the Year’ at Computing magazine’s prestigious 2007 ‘Awards for Excellence’.

The Computing Awards for Excellence are one of the most sought-after awards in the UK IT industry. Year-on-year, the awards recognise the contribution of individuals, teams and organisations that have excelled in the use, development and deployment of IT.

The ‘Business Hardware Supplier of the Year’ accolade is recognition that Secerno has excelled in the provision of IT systems and in supporting industries based on its product quality, value-for-money and innovative offering.

“The standard of entries was absolutely outstanding this year for all categories, and it was an extremely difficult job to select a shortlist and the ultimate winners,” said Bryan Glick, editor of Computing. “For Secerno to have won the Best Hardware Supplier category is a great achievement, as the company has really impressed the judges.”

Steve Hurn, CEO at Secerno, commented, “We are absolutely thrilled to be chosen by the IT industry as the top hardware supplier. This win is a testament to Secerno’s ability to develop forward-thinking solutions for our customers, and it also shows that the industry recognises the importance of secure databases in this increasingly digital age, realising the crippling impact a security breach could have on a business.”

In the last few months, Secerno has also been named winner of SC Magazine’s 2007 Innovation Award and received Red Herring 100 Europe status, as well as being awarded IPS Product of the Year 2007 by Techworld.

About Secerno

Award-winning Secerno provides the world's most advanced, comprehensive and intelligent database security solution.

Deploying a microperimeter approach, Secerno.SQL sits right next to an organisation's data asset to protect data at the highest level. Its unique machine-learning technology understands the true intent of database interactions and protects an organisation's data from both known and unknown threats to data, whether they originate from external or internal sources.

Located in Oxford, UK, Secerno enables the continuous improvement of data security by allowing companies to understand, control and protect their data assets. It empowers organisations to derive the most value from their information and to enable data security without the costs associated with traditional solutions.

Secerno offers protection to customers across an array of industries including financial services, healthcare and pharmaceuticals, retail and government agencies and departments. Secerno is funded by UK investors, including Eden Ventures, Quester and Oxford Venture Management, who have a successful track record for backing winning innovators and entrepreneurs.
