

## **Secerno launches new database appliance boosting companies' ability to solve compliance conundrum**

British innovator first to provide signed audit logging and centralised management of database assurance right across the enterprise

25 January, Oxford, UK – Award-winning data security solutions provider, Secerno, has launched today a new version of its flagship product geared to offering databases protection at highest level from both internal and external attacks..SQL v1.1 follows Secerno's history of innovation by being the first on the market to provide users with the ability to manage their database security from a central location, giving them a clear, legally-admissible audit trail from databases right across the enterprise, to facilitate compliance with regulatory requirements.

"The threat to databases continues to grow at an alarming rate<sup>1</sup>. Secerno is addressing this heightened vulnerability with this latest version by improving companies' ability to control access to database applications and help achieve regulatory compliance effectively and swiftly." Says Paul Davie, Secerno's CEO.

Secerno's solutions are already being deployed effectively to provide an independent and reliable process for managing database access for security and compliant-conscious organisations.

Secerno offers a totally new generation of security product. Its patent-pending technology allows intelligent database security by allowing organisations to understand and control the usage of database applications and so protect critical data more quickly and effectively. It is not constrained by the usual black list/white list approach but develops a clear pattern of behaviour for each user accessing the database.

Secerno.SQL is available now from Secerno and its channel partners. Contact Secerno on [enquiries@secerno.com](mailto:enquiries@secerno.com) or 0845 450 9460 for more information.

### **About Secerno**

Award-winning Secerno products deliver the most sophisticated and effective solution for data security on the market. Secerno protects against internal or external, known or unknown database threats, and assures the integrity and privacy of your data. Secerno's patent-pending database artificial intelligence technology forms a concise, manageable and clear description of application and data behavior in real time. This enables accurate monitoring, trapping, reporting and auditing of any and all abnormal or inappropriate attempts to access key business data. Secerno introduces an unprecedented level of control, protects your reputation and assures the safe use of data, to support business growth.

Located in the city of Oxford, United Kingdom, Secerno is based on ground breaking research pioneered by Secerno's CTO, Dr Steve Moyle. Secerno offers protection to customers across an array of industries including financial services, healthcare and pharmaceuticals, retail and government agencies and departments. Secerno is funded by UK investors, including Eden Ventures, Quester and Oxford Venture Management, who have a successful track record for backing winning innovators and entrepreneurs.
